

E-Discovery for Backup Tapes: Easing the Burden

An e-Discovery Lunch-and-Learn from Integreon

E-discovery experts consider backup tapes to be one of the most challenging sources of electronically stored information (ESI). Using traditional methods to restore data can be time consuming and expensive, easily costing hundreds or even thousands of dollars for a single tape. The costs can quickly mount in cases requiring a substantial number of tapes. But now there are advanced technology solutions that can significantly reduce both the time and cost of tape discovery. Keeping up on the latest technologies enables legal professionals to make informed, cost-conscious technology decisions for each discovery matter.

INSTRUCTOR

Jeffery Fehrman

*Vice President,
Forensics & Consulting*

Jeff has more than 14 years of experience in the electronic evidence and information technology fields. He specializes in providing consulting and advisory services to law firms, corporations, and government clients throughout the e-discovery lifecycle.

He is a subject matter expert on electronic evidence and frequently speaks about innovations and obstacles facing corporations and law firms today. He has also been an active member since 2006 in the Sedona Conference's Working Group on Electronic Document Retention and Production.

This educational session will highlight tape discovery technology advances and the impact technology decisions can have on discovery costs and timelines.

By the end of the session, attendees will:

- Gain a better understanding of recent changes in ESI discovery methods
- Learn strategies to avoid costly tape restoration and backup environment staging
- Understand best practices for defensible search and indexing of backup tapes
- Know how to better apply the right technology in each discovery situation to control costs and achieve the best outcome
