

## Integreon's eView™ Hosted Document Review Platform

Integreon's eView™ application is a market-leading, highly scalable, secure, and specialized review platform that is field-proven by the world's leading law firms and corporate legal departments. eView™ enables clients to better manage the workflow, productivity, and quality of large, complex projects. Clients can utilize just our hosting infrastructure or they can also take advantage of services provided by our experienced reviewers and project managers.

### Our Clients Trust Us Because We Deliver:

#### Greater Efficiency and Lower Cost

Document review can be the largest cost of discovery. eView provides clients with superior document review and administrative efficiency, reducing the duration and cost of any project. Specifically, eView offers complete ease-of-use for reviewers, requiring minimal training, as well as quick project set up and document assignment.

#### Higher Quality of Output and Reduced Risk

eView's workflow and reporting capabilities allow clients to effectively control, measure, and document every step of the review process, resulting in higher quality of discovery process and output. Our platform supports multi-leveled review and automated processes to ensure quality, provides real-time reviewer statistics, and documents every review decision.

### CLIENT EXPERIENCE:

*"We used eView's concept clustering feature on an internal investigation for our client. This enabled two staffers to quickly eliminate documents that were irrelevant and promote the documents that were potentially relevant to our clients' investigation. We saved the client a significant amount of money by not having multiple attorneys reviewing the entire corpus of data for multiple weeks. Only the promoted documents were reviewed and the necessary information was sent to the client faster and cheaper than dealing with this in a traditional fashion."*

- Senior IP Paralegal, Am Law  
100 Law Firm

### eView Features:

Clients who choose our platform can expect:

- **Ease-of-use** with a Citrix web-based interface
- Powerful, **scalable** SQL-based engine
- **Customizable** workflow
- High-quality, skilled **technical support**
- Efficiency features such as **Adaptive Coding** (i.e., technology-assisted review) and **Concept Search** that expedite the categorization, prioritization, and coding of documents

## Key Attributes of eView™ Include:

### Built-in Analytics

eView offers powerful analytics that enable project leaders to assess data collections prior to the start of reviews to determine the most efficient workflow and approach for managing each project. Data can be analyzed, organized, assigned and eliminated based on conceptual analysis, search terms, email discussion threads or through eView's manual and automatic grouping functionality in order to ensure an efficient review process.

### Intelligent Review Process

eView provides an intelligent review platform that offers project leaders their choice of workflow, rather than forcing them to conform to a pre-configured, one-size-fits all approach. The application's fully integrated and customizable environment easily adapts to traditional linear reviews, advanced multi-level reviews and reviews organized by concepts and email threads. eView also provides efficiency features including the ability to highlight key words throughout the document collection and support for dual-display configurations.

### Technology-Assisted Review

eView offers Adaptive Coding for technology-assisted review that supports automated coding of documents. The Adaptive Coding functionality utilizes Latent Semantic Indexing (LSI) to classify a large number of documents quickly based on their conceptual nature. Adaptive Coding also helps to accurately identify responsive and privilege documents, eliminate non-responsive documents, and organize them for expedited review.

### In-Depth Reporting

With eView, managers can assess the real-time progress of all of their document review projects, as well as the progress of specific teams and individual reviewers. Project leaders can easily track metrics using any of more than 30 available reports or we can create customizable reports to measure unique project imperatives.

### Integrated Privilege Management

eView's enhanced centralized privilege management module improves efficiency by automatically generating privilege logs while reviewers work. Authorized users can edit logs and use TIFF-on-the-fly capabilities, one-click redactions and transparency views to quickly give authorized users access to redacted, privileged data.

### Managed Review Services

eView can optionally be packaged with Integreon's Managed Review service to provide clients with experienced reviewers following ISO goal-certified best practices from any of its secure review centers around the world or on-site at the client's premises.
